3Q14 Earnings Comment

3Q14 Actual result vs. estimates							
<u>TLmn</u>	<u>Actual</u>	<u>Cnbc-e</u>	<u>Ak</u>				
Net Int.In.	1,195	-	1,193				
NIM	3.5%	-	3.5%				
Net Inc.	348	354	350				
Sh.Equity	13,682	-	13,688				

Key notes: RoE remained weak albeit an increase in NIM

- ✓ Vakifbank posted a 3Q14 net profit of TL348mn (almost the same as in 2Q14) and in line with our net profit estimate of TL350mn and the market consensus estimate of TL354mn. Thus, the bank's cumulative net profit for 9M14 came in at TL1,070mn, down by 7.8% YoY, with an RoE of 10.9% vs. 12.8% in 9M13.
- ✓ The solid performance in net interest income (albeit with the seasonally negative anomaly from CPI linkers) and commission generation in 3Q14 was not sufficient to lead to QoQ EPS growth, because of sizeable sum of non-recurring provision releases in 2Q14. Meanwhile, the bank's general provision burden in 3Q14, albeit on accelerated loan growth, was also milder than that of its peers, largely because of TL70mn in pre-loaded general provisioning set aside for the regulatory adjustment in 2Q14.
- ✓ Based on our calculation, the 11% QoQ increase in net interest income to TL1,195mn was completely thanks to a sharp fall in TL deposit costs and 28bps QoQ surge in the NIM to 3.5%. As such, the lower inflation proxy in 3Q14 (relative to 2Q) shaved TL106mn off its return on CPI linkers on a QoQ basis.
- ✓ Net NPL inflows in 3Q14 jumped to TL334mn, largely because of a slowdown in the collection performance due to seasonal factors, taking the bank's NPL volume to TL3.9bn with an NPL ratio of 3.9% (down 10bps QoQ) by the end of 3Q14. Meanwhile, the volume of Group II loans, which comprised 4.3% of the gross loan book, remained unchanged at TL4.3bn.

Comment & rating:

✓ Our view on Vakifbank after the 3Q14 results remains neutral. We like Vakifbank's cautious provisioning policy which kept its NPL coverage at 94% (among the highest in the sector) and prevented the Bank from achieving a better RoE (contrary to some banks, which were able to report better results with an easing in their NPL coverage ratios). However, Vakifbank's RoA, despite its solid collection performance, still remains low and depresses its RoE. Following the release of the 3Q14 results, we cut our 2014 earnings forecast by 1.5% to TL1,475mn while raising our 2015 forecast by 3% to TL1,650mn. Our 12 month target price stands at TL4.80, offering 9% upside. We maintain a 'Neutral' rating for Vakifbank.

Analysis

- * A resilient NIM in 3Q14 Despite a TL106mn erosion in the bank's return on CPI linkers, largely because of a decline of around 100bps in average TL deposit costs (in contrast with a milder easing in TL loan yields), Vakifbank was able to improve its NIM by 28bps QoQ. The management expects a stable core spread in 4Q14 with an increase of around TL60mn in income from CPI linkers. Therefore, an increase of up to 10bps QoQ in the NIM in 4Q14 appears likely.
- * A positive but slightly lower contribution from FX & trading gains Since Vakifbank is one of the few banks which do not utilize short term currency swaps to provide TL funding, its FX & trading gains of TL33mn largely reflected gains on bond trading and other Treasury operations (rather than swap costs). However, the TL50mn decline in this figure on a QoQ basis relative to 2Q14, when the Bank had recorded more trading gains, translates into a weaker contribution to the bottom line in 3Q14.
- * Pre-loaded provisioning kept general provisioning low in 3Q14 Vakifbank had set aside TL107mn of general provisioning in 2Q14, incorporating a TL70mn pre-loaded burden for the regulatory increase of the general provisioning rate on general purpose consumer loans. Thanks to the up-front provisioning in the previous quarter, Vakifbank's total general provisioning in 3Q14, despite a speed-up in loan growth, contracted to TL86mn (in contrast with the tendency at many of its peers).
- * A decline in the NPL ratio despite a slowdown in NPL collections Vakifbank recorded TL159mn of net NPL entries in 3Q14, exceeding the TL129mn in 2Q14. However, because of the faster loan growth, the bank's NPL ratio contracted by 10bps QoQ to 3.9% by the end of 3Q14. Vakifbank has maintained its conservative approach with a policy of no NPL write-offs and its NPL coverage further increased by 74bps QoQ to 93.9%. As a result, the bank recorded specific provisions of TL305mn in 3Q14, keeping its gross specific CoR at 129bps (vs. 154bps in 2Q14). However, thanks to the strong NPL collection performance, the bank's net specific CoR remained at 65bps (56bps in 9M14). The bank does not expect any major hike in its provisioning burden in 4Q14 and maintains its net specific CoR guidance at 60bps.
- * Solid performance in fees and commissions Despite negative seasonality in contributions from account maintenance fees, total net fees and commissions were up 17.7% QoQ in 3Q14, reflecting Vakifbank's accelerated loan growth in the quarter. Nevertheless, the cumulative figure in 9M14 was down by 1.8%. The management expects little or no change for the year end.
- * Operating costs better than initial guidance Despite an additional burden of around TL71mn resulting from cancellations and back payments of some fees and commissions to customers (due to court rulings), the increase in operating costs in the first nine months of 2014 remained at 15.9%. The bank stated that the increase in operating costs for the 2014 full year would be lower than its initial guidance of CPI + 500bps, largely thanks to improved efficiencies achieved through retirements and other programmes.
- * Loan growth driven by TL retail loans Vakifbank registered 3.5% QoQ loan growth on the TL side, mainly driven by SME lending. This was accompanied by 6.7% QoQ growth in FX loans (in US\$ terms), largely thanks to a US\$500mn project finance loan extended to Turkey's national oil company (TPAO) for the joint financing of its purchase of a 10% stake in Sahdeniz gas reserves and the South Caucasus gas pipeline.
- * Strong growth in TL core deposits As far as funding was concerned, Vakifbank was more aggressive in deposit collection than in previous quarters and registered a solid 7.0% QoQ core deposit growth, mainly driven by FX retail deposits. In addition, the Bank also continued to expand its borrowing through bonds issues via private placements.
- * Solvency ratios below the sector average As a result of the strong loan growth, Vakifbank suffered a 42bps QoQ erosion in its CAR to 13.9% by the end of 3Q14. Meanwhile, its Tier-1 ratio also contracted by 44bps QoQ to 11.1% by the end of 3Q14. Thus, both of its CAR and Tier-1 ratios are less than the depository banks' average respective ratios of 15.3% and 12.9%. Nevertheless, largely thanks to Vakifbank's selective use its capital, both of its solvency ratios at the end of 3Q14 were better than their levels at the end of 2013.
